

Create your own... Frozen Flowers

You will need:

- * Different sized plastic containers suitable for freezing
- * Glitter
- * Flower heads and petals
- * Water

Method:

Place the flower heads, petals and glitter into the plastic containers, fill with water and freeze. When needed, remove from the freezer and leave at room temperature to melt slightly before tipping out directly onto the floor outside, or onto a metal or plastic tray (our active world trays are perfect for this). Little learners will be fascinated to watch what happens as the ice melts and the flowers begin to float in the sparkly water.
